CORE COMPETENCIES

Feather CaseManagement & Consulting, LLC ("Feather") was founded in 2007 with the mission to be recognized as the industry leader and the provider of choice for medical, worker's compensation and vocational case management services, specialty consulting and employment hiring solutions.

The home office is located in the Houston, Texas area with thirty-nine (39) staff offices throughout the Mid-West, South and East Coast states. The goal of the company is to provide a professional and quality product while delivering the best customer service in the industry. Feather is a nationally certified Women's Business Enterprise (MWBE), Woman-Owned Small Business (WOSB) and holds full URAC accreditation in case management.

Feather's core services are built on expertise in worker's compensation case management, STAT Preview and Employment Testing. Utilization of state of the art paperless, electronic documentation and billing systems promotes continued future growth and success of our client's worker's compensation programs. The hiring and retention of experienced, advanced credentialed staff results in the delivery of high quality outcomes and client satisfaction. Our service level facilitates proactive cost solutions, effective case management interventions and coordination/resolution of return to work issues to reduce the length of absenteeism while adhering to the ADA guidelines to achieve a safe return to work outcome. Our assertive case management strategies result in reduction of lost time from work and containment of the overall cost of the claim; thus keeping the experience modifier low and worker's compensation premiums affordable. Our OSHA Ergonomic certified staff provides proactive assistance with compliance and work place safety issues, vocational needs and occupational projects.

Feather's Baseline Employment Solutions is a customizable program to facilitate improved hiring practices and ensure new employees are physically capable of performing job specific demands. Baseline Employment Solutions is designed to provide objective data that can be referenced by the treating physician in the event a work related injury occurs; thus allowing the provider to thoroughly address extent of disability and extent of compensability.
